BonTerra (BTR.V) Drills to Extend the Known High-Grade Gold Zones at Quebec Gold Project & Expands Prolific Land Base

First 6 Drill Holes of 2011 Completed – Aggressive Program Builds on High-Grade Discoveries

BonTerra Resources Inc. (TSX-V: BTR) (Frankfurt: 9BR) (US Listing: BONXF) is rapidly executing on an aggressive plan that builds on the high-grade gold discoveries of 2010 holes on its Eastern Extension property which is ideally situated in the new and rapidly developing mining camp of the Urban-Barry Segment of the Abitibi Greenstone Belt located ~170km NE of Val-d'Or in Quebec. Last week BonTerra released news of having completed the first four drill holes of 2011 and this week announced another two plus the expansion of its land base, allowing BTR.V the potential to drill into a new zone.

The first new drill holes of 2011 were drilled to extend the known gold zone both to the east and northwest of BonTerra's BA-10-02 which assayed 21.24 grams/tonne gold over 7.73 metres. The core is now off at the lab for assay and it appears investors have another season of exciting results ahead as these are the first of a series of plans BonTerra has for this prolific grouping of claims.

BonTerra Growing in the Heart of Prolific Mining Camp

News this week of a strategic land acquisition totaling 12 hectares expands BonTerra's interest in the Eastern Extension property and offers BTR.V greater flexibility in drilling and the potential for expanding the known gold zones as to date some drill holes collared by BonTerra have surrounded this new claim on two sides. Previous drill holes completed by BTR.V were drilled just east of this new acquisitions claim boundary. These holes include BA-10-01 and BA-10-03. BA-10-01 assayed 17.06 grams/tonne over 13.50 metres.

With this aggressive exploration program already being executed upon in 2011 and strategic expansion investors in BTR.V have an opportunity to gain exposure to a growing gold exploration/mining company in the process of exposing serious potential value by building on high-grades already discovered. BonTerra's area claim groups are situated next to two big deposits, one which is now being compared to Detour Gold;

BonTerra has the same style of deposit as the neighbouring Metanor Resources' Barry deposit property which contains 309,500 oz Au of Indicated Resources (7,701,000 t at 1.25 g/t Au), 471,950 oz Au of Inferred Resources (10,411,000 t at 1.41 g/t Au). **The independent international professional geological firm SGS Geostat has now identified the Barry deposit as comparable in potential to rival other major deposits such as Osisko's Malartic gold deposit & Detour Gold's Detour deposit** (which contains an open pit mineral reserve of 11.4 million ounces of gold).

BonTerra's deposit, the Barry deposit and Windfall deposit are likely all part of the same structure, in fact Metanor's structure moves southeast towards BTR.V with Metanor's IP geophysical anomalies lighting up like a Christmas tree headed towards BTR.V. The Barry deposit is wide open

With less than 36M shares outstanding (~44M fully diluted) BonTerra Resources Inc. offers one of the best vehicles for investors seeking serious strong growth prospects in precious metals in a safe mining friendly jurisdiction.

James West Recognizes BonTerra's Potential in Elephant Country

This news of the first six drill holes for 2011 comes less than one month after receiving an endorsement by James West (editor of the Midas Letter, regular guest on BNN, contributing commentator to a host of mining publications, and recent (Jan. 2011) CNBC Fast Money discussion panel member). James West acknowledged the tremendous potential of both BonTerra's Quebec gold project and the region, he stated *"With continued drilling success, there is little doubt that BonTerra represents an excellent opportunity with 10-bagger potential for risk-tolerant investors"*.

for expansion and in an area ripe with numerous anomalies leading many to speculate a 4+ million ounce gold target is readily achievable with Metanor having already made musings of long term plans to build a concentrator on site.

The Windfall property (located ~10Km from BTR.V claims) presently owned by Eagle Hill Exploration (EAG - V) just this January 2011 announced another new gold zone. It has completed significant steps towards the definition of a large gold system, potentially amenable to bulk mining. BonTerra is also in close proximity to Amseco, Beaufield, Glen Eagle, Urbana and Freewest, Murgor and Noront.

It is important to remember that area miners such as Aur Resources (now Teck Cominco), Agnico-Eagle and Sigma are currently mining at depths of between 5,000 and 8,000 feet. It is very common in this region for the grades to increase at depth and with the values BonTerra is intersecting near surface, it is clear that BTR.V is worth being involved with now as it grows along – it appears likely that it is only a matter of time before a major swoops in and takes control of this entire new mining camp. ##
